Please give the identifier of your ID registered in Neptun with you (without filling out this part your exam will not be valid).

Question **13**

Complete

Mark 8 out of 8

What are the differences between the project management triangles in "classic" and "agile" project management? What is the difference between the priorities of the triangular elements (i.e. the priorities of the vertices of the triangle)?

The question in classical project management is that a task with a given scope in what time and money can be implemented. While the question in agile project management is that in given time and money what scope can be implemented. So the scope-money-time triangle is "upside-down" for agile project management. Otherwise the agile project management accepts changes of the project easier, focuses rather on the product and the customer instead of too many administration etc.

Word count: 76

Question **14**

Complete

Mark 3 out of 3
